

ABSTRACT

AIR POLLUTION PREVENTION AND CONTROL ACTIONS AROUND THE WORLD: A REVIEW PAPER

**** ADITYA SHARMA¹ & DIKSHANT SHARMA²**

Contamination of air is perhaps the greatest public health crisis of the contemporary world. Not only does polluted air pose deeper health risks to people, but also set into motion, the wheels of climate change crisis and environmental deterioration. The objectives of this review paper are to understand the phenomena of air pollution, check its causes, and learn from the redressal mechanisms adopted across the world, in order to innovate newer and efficient ways of tackling the issue. For the purpose of this review paper, 6 different countries have been studied and their environmental laws and policies have been analysed so as to draw comprehensive conclusions. The relevance of this paper is based on the fact that clean air also happens to be one of the Sustainable Development Goals (SDG). Learning from other countries' models and implementing them in the Indian scenario is the chief aim of this study.

Keywords: Air Pollution, Environment, Sustainable Development Goals, Climate Change
